

Sanchezner Orange

sanchezner.orange@gmail.com | (561) 685-3794 | sanchezner.com | github.com/oh-nought

Education

University of Florida – Bachelor of Arts in Computer Science
Palm Beach State College – Associate of Arts in Liberal Arts

Expected May 2027
Dec 2024

Skills

Languages: Python, SQL, C++, JavaScript
Data: Power BI, Apache Airflow, PySpark, dbt
Cloud: Amazon Web Services (S3, RDS), Google Cloud Platform (BigQuery)
Libraries/Tools: pandas, NumPy, FastAPI, Docker, Git

Projects

Real-time Radxa Telemetry Pipeline & Anomaly Detection github.com/oh-nought/radxa-monitor

- Built streaming ETL pipeline processing hardware telemetry data with multi-threaded C++ collectors feeding Python aggregation layer for real-time monitoring
- Implemented anomaly detection algorithms (EMWA, statistical thresholding) on streaming metrics to surface data quality issues and system performance degradation
- Designed normalization layer standardizing multi-source telemetry formats for consistent downstream analytics and visualization

Ball Don't Lie | NBA Data Pipeline & Analytics github.com/oh-nought/ball-dont-lie

- Orchestrated ETL pipelines using Apache Airflow for incremental NBA data ingestion of 1M+ records with idempotent pipeline logic and state-based checkpoint recovery
- Modeled normalized PostgreSQL schemas across games, players, and referee entities with automated validation ensuring schema consistency during ingestion
- Designed entity resolution system mapping 600+ aliases to canonical IDs using longest-match-first pattern matching with 95% accuracy

LANdToss | Distributed Peer-to-Peer Data Streaming github.com/oh-nought/LANdToss

- Architected a real-time data streaming application enabling 5GB+ file transfers on resource-constrained systems (1GB RAM) and optimized memory usage by >99% through chunked data processing
- Built stateful connection manager coordinating parallel data transfers across multiple concurrent clients with SQLite metadata store for transfer lineage tracking

Involvement

UF Google Developer Student Club (GDSC) | Student Developer Sep 2025 – Present

- Engineered backend data access layers for a campus bartering platform, enforcing user-level data isolation and privacy constraints across all read/write operations
- Developed CRUD endpoints that strictly validated data ownership and transaction integrity

UF Data Science & Informatics Club (DSI) | Member Jan 2025 – Present

- Participated in workshops covering data visualization in Power BI and cloud computing for scalable and automated data pipelines

Work Experience

Grocery Clerk, Publix – Gainesville, FL May 2023 – Dec 2025

- Collaborated with a team to manage inventory operations efficiently while delivering premier customer service
- Earned Exceeds Expectations performance evaluations for reliability and commitment to team objectives
