Education

University of Florida – Bachelor of Arts in Computer Science (GPA: 3.3/4.0)

Expected Dec 2027

Skills

Languages: Python, SQL, C++, JavaScript, HTML/CSS

Cloud: Amazon Web Services (S3, Redshift, RDS), Google Cloud Platform (BigQuery)

Libraries/Tools: Databricks, Apache Airflow, Spark, Dbt, Pandas, PyTorch, FastAPI, Power BI, Git

Work Experience

Undergraduate Research Assistant, UF Data Studio – Gainesville, FL

Feb 2026 – Present

- Built modular ETL pipelines using Python and Pandas to clean and process multi-domain prediction datasets
- Enhanced prediction validation by orchestrating Llama 3.3 ensembles via Groq API to verify sports stats
- Optimized data ingestion with Regex templates to automate identification for unique sentence patterns

Grocery Clerk, Publix – Gainesville, FL

May 2023 – Dec 2025

- Collaborated with a team to manage inventory operations efficiently while delivering premier customer service
- Earned Exceeds Expectations performance evaluations for reliability and commitment to team objectives

Projects

Ball Don't Lie (In Progress) | *Python, Airflow, PostgreSQL, AWS S3*

- Building an NLP query system for NBA referee bias analysis across 600+ referees and 12+ metrics
- Automated robust Airflow pipelines ingesting 1M+ NBA records with checkpoint recovery across 20+ seasons
- Fine-tuned a DistilBERT model to classify query intent with 90%+ accuracy for dynamic SQL generation
- Implemented S3-backed model versioning and training pipeline to iteratively improve intent classification
- Designed a multi-stage query resolver using sentence transformers to filter metrics by entity compatibility

Radxa Monitor | *Python, C++, JavaScript*

- Engineered a multi-threaded ETL pipeline streaming hardware telemetry via UNIX sockets with <10ms latency
- Implemented anomaly detection algorithms (EWMA, Z-score statistical thresholding) on streaming metrics to surface data quality issues and system degradation
- Built an asynchronous FastAPI aggregation layer serving real-time data via WebSockets, reducing overhead by 40% compared to standard HTTP polling

Sixth Man | *Python, PostgreSQL, JavaScript*

- Built a full-stack "Six Degrees of Separation" app revealing teammate chains connecting any two NBA players
- Architected an ETL pipeline with Python to ingest career stats for 5,000+ players into PostgreSQL
- Optimized data extraction with batching and jittered delays to mitigate third-party API rate limits
- Normalized JSON/CSV sources into relational schema, preserving team identity across franchise relocation
- Modeled player relationships as a 500K+ edge adjacency list, enabling <1s BFS/DFS connection pathfinding

Involvement

Student Developer, UF Google Developer Group – Gainesville, FL

Sep 2025 – Present

- Engineered backend data access layers for a campus bartering platform, enforcing user-level data isolation and privacy constraints across all read/write operations
- Developed CRUD endpoints that strictly validated data ownership and transaction integrity
