## EDUCATION

---

### University of Florida

Bachelor of Arts in Computer Science

Gainesville, FL

Dec 2027

**Relevant Coursework:** Machine Learning, Database Systems, Data Structures and Algorithms

## EXPERIENCE

---

### UF Data Studio

Research Intern

Jan 2026 – May 2026

Gainesville, FL

- Built ETL pipelines in Python to process 300+ Youtube transcript segments into labeled prediction datasets
- Improved label reliability by orchestrating a 3-model LLM ensemble via Groq API with majority voting
- Automated sentence normalization with Regex, enabling clean sentence-level input

### Google Developer Groups (UF Chapter)

Backend Subteam Lead

Sep 2025 – Dec 2025

Gainesville, FL

- Led a subteam of 9 to build 9+ RESTful endpoints for a campus marketplace in Node.js and Express
- Engineered session-based auth middleware enforcing ownership access control across all protected routes
- Implemented Sequelize ORM keyword search, enabling title-based item filtering across the platform

## PROJECTS

---

### NBA Player Valuation Analysis | Python, PostgreSQL, AWS S3, MLflow, Prefect, Docker, React

- Deployed a live NBA valuation tool scoring 400+ players daily via Dockerized Prefect workers on a VM
- Built bronze/silver/gold Postgres pipeline ingesting 25+ seasons of game logs with point-in-time feature snapshots
- Trained XGBoost BPM projector (0.78 test R2) with MLflow registry and test-based promotion gates
- Served 26K+ per-game predictions as daily-refreshed static JSON for a React scatterplot frontend

### Data Pipeline Observability Platform | Python, FastAPI, PostgreSQL, Neon, React

- Built a contract-based data observability platform detecting missing, stale, and invalid pipeline artifacts
- Developed a Python SDK enabling pipeline workers to report artifact health through authenticated APIs
- Automated scheduled health checks with persisted status history and alerts on state transitions

### NLP-to-SQL NBA Referee Search Engine | Python, PostgreSQL, AWS S3, Airflow

- Built an NLP query system for NBA referee bias analysis across 600+ referees and 12+ metrics
- Automated robust Airflow pipelines ingesting 1M+ NBA records with checkpoint recovery through 20+ seasons
- Fine-tuned a DistilBERT model to classify query intent with 90+% accuracy for dynamic SQL generation
- Implemented a S3-backed model versioning and training pipeline to iteratively improve intent classification
- Designed a multi-stage query resolver using sentence transformers to filter metrics by entity compatibility

### Real-Time System Monitor with Anomaly Detection | Python, C++, Javascript, FastAPI

- Engineered a multi-threaded ETL pipeline streaming hardware telemetry via UNIX sockets with <10ms latency
- Implemented anomaly detection algorithms (EWMA, Z-score statistical thresholding) on streaming metrics to surface data quality issues and system degradation
- Built an asynchronous FastAPI aggregation layer serving real-time data via WebSockets, reducing overhead by 40% compared to standard HTTP polling

## TECHNICAL SKILLS

---

**Languages:** Python, SQL, C++, JavaScript, TypeScript, HTML/CSS

**ML/MLOps:** PyTorch, scikit-learn, MLflow, Apache Airflow, Prefect, Databricks, dbt, Apache Spark

**Cloud & Infrastructure:** AWS (S3, SageMaker, Redshift), GCP (BigQuery), Docker, Kubernetes, CI/CD

**Libraries/Tools:** pandas, FastAPI, Git, GitHub Actions
